

HOW DO YOU CHOOSE THE RIGHT GENERATOR?

START >>>

WHAT DO YOU NEED TO RUN?

Add up the wattage of all your equipment.

TIME FOR SOME MATHS

Step 1:
Convert your wattage (W) to kilowatts (kW) - Divide by 1000. Don't have a wattage? Use Ohms Law

Step 2:
Divide by 0.8 for your generator size in kVA

OHMS LAW

To get the wattage for any piece of equipment simply follow the formula:

Watts = Volts x Amps

Information can usually be found in the equipment manual.

HOW LONG DO YOU NEED TO RUN THE GENERATOR?

You should aim to use 70% of the generators capacity allowing a margin for any changes. You should only run generators at 100% for short periods of time.
